

Ideasketch _____

with a few words

a floating and filtering event platform

Name: Tim Glatthard

What is the Idea?

My idea is to build an event platform on the water. The platform is directly accessible from the shore. There are three different zones on the platform: A) a stage with a park, B) a restaurant and C) bars with opeanair lounges.

Under the watersurface there are two filters attached. These going to filter the water and also produce electricity with a turbine, which is built inside the filters.

So while you enjoy yourself on the event platform, there will be work done underneath the platform to raise liveability in the city through improved waterquality and clean produced electricity.
